

Hypothetical Projects worth investing into:

Worldwide:

- Provide renewable electricity to rural populations (possibly internet too)
- Provide increased amenities for small island populations.
- Increase water catchment and storage in water scarce countries.
- Have a 3rd party NGO manufacture special bikes to distribute globally to people. Designed to be hardy, simple to repair, cheap to maintain and allow navigation of semi-rough terrain. Additionally, to benefit the average person requiring these bicycles, a pair of bicycles should be able to be connected via a tray to create a lightweight wagon (Lock wheel turning)

Europe:

General:

- Purchase and lend out water bombing helicopters to mitigate fire damages.

Russia:

- Sosnowsky's Hogweed Removal
- Extreme rural population quality-of-life improvements (Decrease vodka dependence)

Danube:

- Increase waterway "Clean-water" protections
- Install and maintain passive ecosystems for the endemic life on the river.
- Build flood prevention systems.

Africa:

General:

- Strengthen rural healthcare by financing flying doctor programs (AMREF)
- Construct western railway connecting Cape Town to Tunis. Combine freight with armoured garrison cars, local infrastructure and insurance covered by the countries participating. Requires anti-derailment and anti-terrorism countermeasures.

Asia:

India:

- Increase standard of living of unindustrialised locations with modern amenities.
- Mechanise rural agriculture.
- Road infrastructure to avoid / reinforce the Zoji Pass
- Diversify Indian agriculture and land management protocols

China:

- Reforestation of the Gobi desert. [Need ecologists' feedback]

Iraq:

- Assist with a more permanent solution to the Mosul dam instability.

Americas:

South:

- Build road infrastructure to circumvent risky mountainous paths (Such as the Bolivian North Yungas Road)

Oceania:

Australia:

- Irrigate central Australia with ocean channels and passive precipitation.
-
